FlashGen

- Brendan Cicchi
- Sara Woods
- Remington Maxwell

- Current flash card generators are tedious and inefficient
- Convert notes to flash cards in one easy step
- Users type notes using a basic editor
- Indicators will specify the question for the front and the answer on back
- A GUI allows users to toggle and flip the flashcards
- Text parsing and IO will be done initially in Haskell
- GUI creation will be done in Python
- If time allows we switch the roles of languages!
- With FlashGen, flash card generation is made easy
